

## pdfPerfect

Preflight Checks for Maximum Production Security

There are good reasons for choosing a module from ppi's Publishing Solutions for preflight checking your production files. On the one hand, it reduces the number of external interfaces, which in turn eliminates the source of potential adjustment and support problems. On the other hand, this integrated ppi solution guarantees a highly automated, end-to-end workflow. As an ideal solution for finishing your production workflow, pdfPerfect creates more transparency and maximum security for checking PDF and EPS files.

### Everything's perfect with pdfPerfect

In a highly automated process, pdfPerfect allows you to check EPS and PDF files for their suitability for production and, if necessary, to correct them. The output format is PDF, a format which definitely belongs to the future due to its advanced graphic options and to growing market requirements.

The checks are stored in profiles for each publishing house; different profiles are possible depending on specific requirements. For instance, different profiles can be used for 4c and black and white ads in a daily newspaper or for magazine-like print media.

### Range of functions

- Normalization (uniform PDF version for all checked files).
- Color space checks, color space conversion.
- Image resolution checks, image resolution reduction.
- Hairline checks and correction.
- Checks for multipage PDF documents, splitting of documents.
- Checks for transparencies and transparency flattening.
- Checks for missing fonts or, if applicable, embedded fonts.
- Automatic clipping according to printer's marks.

### Meaningful check protocols

The check protocols are output in XML, HTML or PDF format. In the PDF protocol, warnings and errors are marked clearly and can be viewed on different levels (see illustration below).

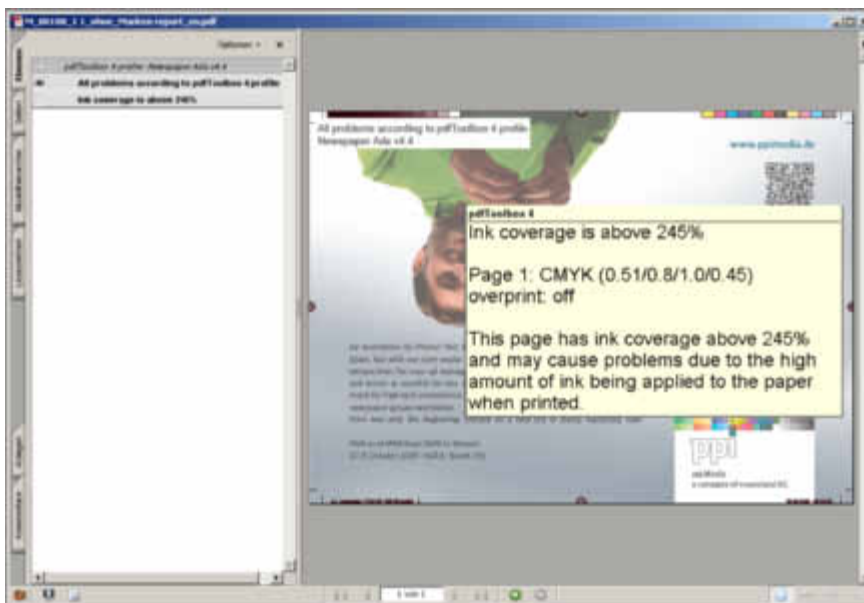

### Multiple areas of application

You can use pdfPerfect in your ad workflow with AdMan or in your output management workflow with OM. But it can also be used as a standalone solution wherever a reliable PDF checking function is required.

If you produce your ads with AdMan, an option for comparing the planned/actual values is available. You can remove any conflicts either automatically according to preconfigured settings or manually on the AdMan GUI.

### In a nutshell

By integrating pdfPerfect you can optimize your preflight workflow, since at the end of the day, you will benefit from lower overheads combined with maximum production security and quality.
